

45-0021 Recessed Low Voltage Cable Plate with Recessed Power

Use DataComm Electronics patent pending new recessed low voltage cable plate with recessed power to install power and low voltage cables behind your flat panel TV, your amplifier or other audio and video devices. The 45-0021 recessed low voltage cable plate with recessed power can be installed upright or upside down.

Use either a single gang retrofit work box (like the one shown in the picture) or for new construction installations, use a new nail on box. When you have wired the receptacle*, begin by inserting the receptacle portion of the plate into the work box. Once the entire recessed plate is flush to the wall, using the two white screws supplied, screw the receptacle portion of the plate to the work box. Next, screw down the screws with wings. These wings will fasten tightly against the back of the drywall. Plug in all necessary video and audio cables. Install your flat panel TV mounting bracket per the flat panel TV bracket manufacturer's instructions.
