MIMOlite installation instructions for Vera Controllers rev. 3May2013

Link: http://wiki.micasaverde.com/index.php/MIMOlite

The MIMOlite device supports multiple functions. This plugin adds 3 child devices that can be used in scenes and triggers like a normal device. To fully support MIMOlite in VERA the following steps are required:

- Make sure you have at least version 1.5.622 on your unit
- Go to Apps -> Install Apps
- Login if needed
- Search for "MIMOlite" and install it
- After the plugin is installed a new generic device will be installed
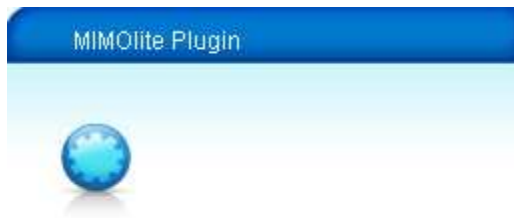

Go to the Advanced tab and locate the **MIMO_Devices** variable

- Fill in the Device #ID of the physical MIMOlite device, which you already included in the network
- New child devices will be created which you can use in scenes and triggers

Mimo #3 generic sensor...	Mimo #3 pulse meter	Mimo #300 binary sensor...	Mimo #300 generic sensor...	Mimo #300 pulse meter
